

# Everyone Counts ensures Online Voting Success at Republican Party of New Mexico's Pre-Primary Convention

March 27, 2016

Two benefits of the party's move to online voting: onsite voter enrollment and immediate announcement of results

Everyone Counts, the leader in secure electronic voting solutions, successfully delivered online voting and instant results for the delegates at the Republican Party of New Mexico's Pre-Primary convention on February 20th.

Everyone Counts had an election administration expert onsite to provide log-in credentials as required by the party for people who hadn't signed-up in advance, providing immediate access to voters and ensuring that all qualified members could vote.

Close to 500 delegates used Everyone Counts' eElect electronic voting to cast their selections for Secretary of State, Supreme Court Justice, Court of Appeals, and U.S. Congressional seats in their three districts. Voters authenticated into the eElect electronic ballot system where they cast their ballot securely and easily using Everyone Counts' software on off-the-shelf tablets provided by the Republican Party.

After the close of the election, votes were tabulated and provided to the party within 10 minutes, allowing for instant results. Before switching to online voting, hand counting paper ballots would take several hours and often not be completed until early the next morning; this year, for the first time ever, the Party was able to announce the election results at the convention in front of the delegates.

"The New Mexico State Republican Party was very pleased with the performance of Everyone Counts software," said Jacob Cardenas, Field Director at Republican Party of New Mexico. "We will be using their services again in May for our State Party's Quadrennial Election."
